Forex trading

Here are some key aspects of forex trading:

Forex trading involves the simultaneous buying of one currency and selling another. Currencies are traded in pairs, for example, EUR/USD (Euro/US Dollar), GBP/USD (British Pound/US Dollar), etc.

Forex trading often involves the use of leverage, which allows traders to control a larger position size with a smaller amount of capital. While leverage can amplify profits, it also increases the risk of significant losses.

The forex market can be highly volatile, providing numerous trading opportunities but also carrying increased risks. Economic events, geopolitical factors, central bank decisions, and other global news can significantly impact currency prices.

The forex market operates 24 hours a day, five days a week, starting from the opening in Asia on Sunday evening and closing in the United States on Friday evening. This continuous operation allows traders from around the world to participate at any time.

Why FOREX

We live and breathe the markets. Since 2001, we've educated traders to help them learn about the markets.
